

BALE COVERING FILM

WWW.COVER-FILM.EU

The film for forming bales COVER FILM can successfully replace the classical net. It allows even tighter packaging of the material, preparing it for wrapping or storage of dry bales on a field.

Thanks to using most durable materials and newest technologies in production, COVER FILM despite only 13 microns structure, can perfectly form a bale. This solution can help you optimize the costs in your farm

COVER FILM pozwala na uzyskanie balotów o idealnym kształcie, zapobiegając przy tym stratom w materiale, a także ułatwia transport i przechowywanie.

	Width	Length
Standard	125-130cm	2000-2300m
Custom	70-150cm	1000-3000m

COVER FILM, thanks to its unique properties, facilitates your work and saves your time. The uniform structure of the film perfectly protects against snow, rain etc., and allows safe storage of grass and hay on a field without a fear that it gets wet.

UV stabilization protects your harvest for up to 12 months.

COVER FILM allows forming bales of an ideal shape, preventing the waste of material and facilitating transport and storage.

The perfect shape of a bale simplifies wrapping it with AERO WRAP film which makes the gas exchange barrier stronger and guarantees a better quality of the silage.

The product helps to decrease the number of layers of AERO WRAP film needed (20 % less) because by UV stabilization COVER FILM itself is a good protection against weather conditions.

Thanks to using high quality, resistant to damage raw materials, COVER FILM has a quality of classical net and allows wrapping practically any material.

COVER FILM is made of fully recyclable materials.

It has a composition similar to AERO WRAP so both products can be processed together with no need of separating them.

The product is available in standard sizes or adjusted to the demands of every customer.
